## RISK MANAGEMENT DEPARTMENT

### NEW NAME, SAME TEAM

To align with the Enterprise Risk Management (ERM) strategy that Magnum has implemented over the past few years, we are excited to announce the rebranding of the Safety Department! The Safety Department will now be called the **Risk Management Department**.

**What is Enterprise Risk Management?** ERM is the proactive process of identifying, addressing, and managing the potential events that represent risk to the achievement of our strategic objectives. A comprehensive ERM program consolidates and improves risk reporting by identifying the likelihood of risk happening; and if it does happen, what is the impact it could have on Magnum. Once we understand the likelihood and impact a risk has, we can then implement proper controls to avoid the risk, reduce or mitigate the risk, transfer the risk, or accept the risk.

Everything we do has risk. By integrating ERM into our daily culture and operations, we provide a channel towards informed decision-making that puts Magnum in a position to reach our strategic objectives.

### TEAMS WITHIN A TEAM

Teams have been created within the Risk Management Department to better align the job duties of those on the team.
